

BBS

姓名：_____ 章程_____

学号：_____ 2017210218059_____

一、 项目需求

简易的 BBS 微信小程序

二、 功能分析

- (1) 登录识别身份
- (2) 浏览所有根问题
- (3) 浏览对应问题的回复
- (4) 回复
- (5) 删除自己的留言
- (6) 新建问题

三、 总体设计

DB----->API----->MP

四、 实现原理

利用 MySQL 数据库建立数据库，建立 API 接口，前端调用接口。

五、 模块划分

- (1) 注册登录：login
- (2) 主界面：initial
- (3) 浏览根问题：search
- (4) 回复问题：reply
- (5) 浏览回复：checkreply
- (6) 新建问题：write

删除回复功能在模块 4 和模块 5 里。

六、 各模块实现过程

(1)模块 1: login

部分代码:

login.js

```
data: {
  username: '',
  password: '',
  authorid: ''
},
bindusername: function (e) {
  console.log(e.detail.value)
  this.setData({
    username: e.detail.value
  })
},
bindpassword: function (e) {
  console.log(e.detail.value)
  this.setData({
    password: e.detail.value
  })
},
clicktoreg: function () {
  var that = this;
  wx.request({
    url: 'http://172.22.130.33/index.php/Ajaxapi/Ajaxapi/reg',
    data: {
      username: that.data.username,
      password: that.data.password
    },
    success: function (res) {
      wx.showToast({
        title: 'Successfully Regist',
        icon: 'none',
        duration: 10000
      })
    }
  })
},
clicktolog: function () {
  var that = this;
  var id = that.data.authorid;
  wx.request({
    url: 'http://172.22.130.33/index.php/Ajaxapi/Ajaxapi/login',
    data: {
      username: that.data.username,
      password: that.data.password
    },
    success: function (res) {
      console.log(res.data.data)
      if (res.data.data != null) {
```

```

id = res.data.data.id
that.setData({
  authorid: res.data.data.id
})
wx.setStorage({
  key: 'id',
  data: id,
})
wx.navigateTo({
  url: '/pages/initial/initial',
})
}
else {
  wx.showToast({
    title: 'The information entered is incorrect',
    icon: 'none',
    duration: 10000
  })
}
},
fail: function () {
  console.log("fail")
}
})
},

```

login.wxml

```

<view class="page-section">
  <view class="weui-cells__title">username</view>
  <view>
    <input style="border:1px solid" maxlength="10" bindinput="bindusername" />
  </view>
  <view class="weui-cells__title">password</view>
  <view>
    <input password="true" style="border:1px solid" class="weui-input" maxlength="10" bindinput="bindpassword" />
  </view>
  <button type="default" bindtap="clicktoreg" > Regist </button>
  <button type="default" bindtap="clicktolog" > Login </button>
</view>

```

(2)模块 2: initial

部分代码:

initial.js:

```

//编写问题
write: function () {
  wx.navigateTo({
    url: '/pages/write/write',
  })
},
//浏览问题
search: function () {
  wx.navigateTo({
    url: '/pages/search/search',
  })
}

```

```
},
```

initial.wxml:

```
<view>
<image src="/images/images/timg.jpg" class="tp1"></image>
</view>
<!--write-->
<view class="image-parent" bindtap="write">
<image src="/images/images/write.png" class="tp"></image>
<text style="font-size:1.5rem;">Write problem</text>
</view>
<!--search-->
<view class="image-parent" bindtap="search">
<image src="/images/images/search.png" class="tp"></image>
<text style="font-size:1.5rem;">Browse problem</text>
</view>
```

(3)模块 3: search

部分代码:

search.js:

```
data: {
  message: [],
  userid: 59
},

/**
 * 生命周期函数--监听页面加载
 */
onLoad: function (options) {
  var that = this;////====注意此处, 要用 that 指代 this=====
  this.userid = app.globalData.userid
  wx.request({
    url: 'http://172.22.130.33/index.php/Ajaxapi/Ajaxapi/browserroot',
    method: 'get',// OPTIONS, GET, HEAD, POST, PUT, DELETE, TRACE, CONNECT
    data: {
    },
    success: function (res) {
      console.log(res);
      that.setData({ //=====不能直接写 this.setDate=====
        message: res.data.data, //在相应的 wxml 页面显示接收到的数据
      });
    }
  })
},

checkreply: function (e) {
  app.globalData.id = e.currentTarget.id;
  console.log(app.globalData.id)
  wx.navigateTo({
    url: "/pages/checkreply/checkreply",
  })
},

reply: function (e) {
```

```

app.globalData.id = e.currentTarget.id;
console.log(app.globalData.id)
wx.navigateTo({
  url: "/pages/reply/reply",
})
},

```

search.wxml:

```

<view wx:for="{{message}}">
<view class="image-parent">
<view>ID:{{item.id}}</view>
<view>Problem:{{item.problem}}</view>
<view>UserID:{{item.userid}}</view>
<view>Createtime:{{item.createtime}}</view>
<view class='btns'>
<button bindtap='checkreply' id="{{item.id}}">
<view>check</view>
</button>
<button bindtap='reply' id="{{item.id}}">
<view>reply</view>
</button>
</view>
</view>
</view>
</view>

```

(4)模块 4: reply

部分代码:

reply.js:

```

data: {
  nr: null
},
nrInput: function (e) {
  console.log(e.detail.value)
  this.setData({
    nr: e.detail.value
  })
},
/**
 * 生命周期函数--监听页面加载
 */
onLoad: function (options) {

},
publishbt: function (e) {
  console.log(getApp().globalData.id)
  wx.request({
    url: 'http://172.22.130.33/index.php/Ajaxapi/Ajaxapi/reply/userid/' + getApp().globalData.userid + '/problem/'
    + this.data.nr + '/parentid/' + getApp().globalData.id,
  })
},

```

reply.wxml:

```

<view>
<text style="font-size:1.2rem">Write a problem:</text>
</view>
<!-- 文本框 -->
<view>
<textarea bindinput="nrInput"></textarea>
</view>
<view>
<button class="button_style" bindtap='publishbt'>publish</button>
</view>

```

(5)模块 5: checkreply

部分代码:

checkreply.js:

```

var app = getApp();
Page({
  /**
   * 页面的初始数据
   */
  data: {
    message: [],
    userid:59,
  },

  /**
   * 生命周期函数--监听页面加载
   */
  onLoad: function (options) {
    var that = this;//=====注意此处，要用 that 指代 this=====
    this.userid = app.globalData.userid
    wx.request({
      url: 'http://172.22.130.33/index.php/Ajaxapi/Ajaxapi/browsereplybyid/pid/' + app.globalData.id,
      method: 'get',// OPTIONS, GET, HEAD, POST, PUT, DELETE, TRACE, CONNECT
      data: {
      },
      success: function (res) {
        console.log(res);
        that.setData({ //=====不能直接写 this.setDate=====
          message: res.data.data, //在相应的 wxml 页面显示接收到的数据
        });
      }
    })

  },

  checkreply: function (e) {
    app.globalData.id = e.currentTarget.id;
    console.log(app.globalData.id)
    wx.navigateTo({
      url: "/pages/checkreply/checkreply",
    })
  },

```

```

reply: function (e) {
  app.globalData.id = e.currentTarget.id;
  console.log(app.globalData.id)
  wx.navigateTo({
    url: "/pages/reply/reply",
  })
},

del: function (e) {
  var that = this; //====注意此处, 要用 that 指代 this====
  this.userid = app.globalData.userid
  wx.request({
    url: 'http://172.22.130.33/index.php/Ajaxapi/Ajaxapi/deleteproblembyid/pid/' + e.currentTarget.dataset.s +
    '/userid/' + app.globalData.userid,
    success: function (res) {
      console.log(res);
      that.setData({ //====不能直接写 this.setDate====
        message: res.data.data, //在相应的 wxml 页面显示接收到的数据
      });
    }
  })
},

```

checkreply.wxml:

```

<view wx:for="{{message}}" >
  <view class="image-parent">
    <view class="col-4 font-break">ID:{{item.id}}</view>
    <view>Problem:{{item.problem}}</view>
    <view>UserID:{{item.userid}}</view>
    <view>Createtime:{{item.createtime}}</view>
    <view class='btns'>
      <button bindtap='checkreply' id="{{item.id}}">
        <view>check</view>
      </button>
      <button bindtap='reply' id="{{item.id}}">
        <view>reply</view>
      </button>
      <view wx:if="{{item.userid==userid}}">
        <button bindtap='del' data-s="{{item.id}}">
          <view>delete</view>
        </button>
      </view>
    </view>
  </view>
</view>

```

(6)模块 6: write

部分代码:

write.js:

```

var app = getApp()
Page({

```

```

/**
 * 页面的初始数据
 */
data: {
  nr: null
},
nrInput: function (e) {
  console.log(e.detail.value)
  this.setData({
    nr: e.detail.value
  })
},
publishbt: function (e) {
  console.log(getApp().globalData.id)
  wx.request({
    url: 'http://172.22.130.33/index.php/Ajaxapi/Ajaxapi/createproblem/userid/' + app.globalData.userid +
    '/problem/' + this.data.nr,
    success: function (res) {
      if (res.data.info == 1) {
        wx.showToast({
          title: '创建成功',
          icon: 'none',
          duration: 8000,
        })
        wx.navigateTo({
          url: '/pages/initial/initial',
        })
      } else {
        wx.showToast({
          title: '创建失败',
          icon: 'none',
          duration: 8000
        })
      }
    }
  })
},

```

write.wxml:

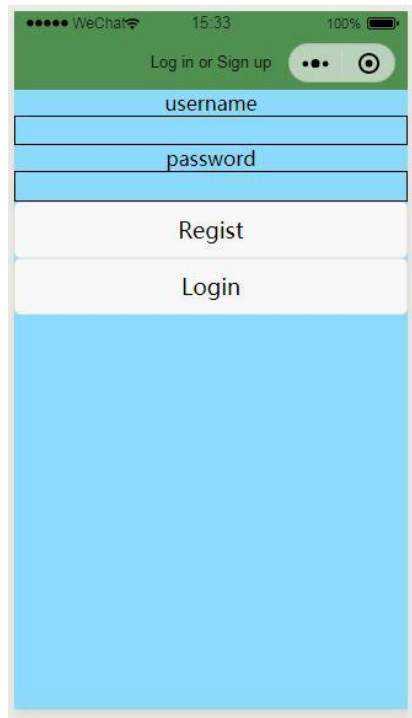

```

<view>
<text style="font-size:1.2rem">Write a problem:</text>
</view>
<!-- 文本框 -->
<view>
<textarea bindinput="nrInput" placeholder="Please enter text here"></textarea>
</view>
<view>
<button class="button_style" bindtap="publishbt">publish</button>
</view>

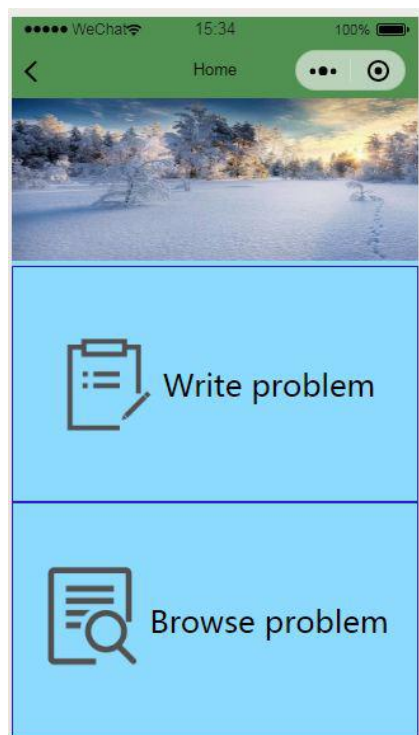

```

七、 各模块实现结果截图

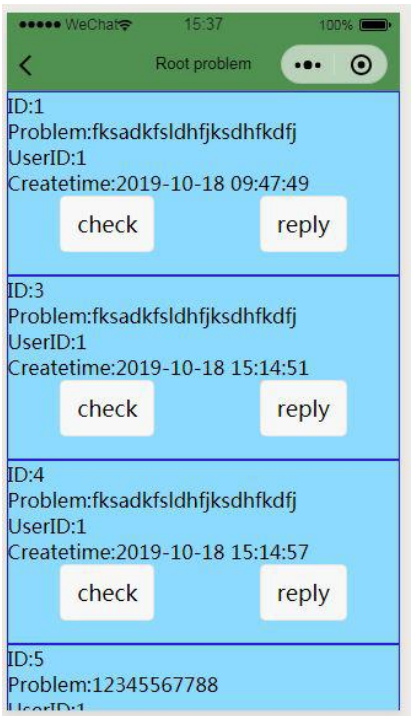

注册登录界面：

注册登录后进入主界面：

点击 Browse problem， 查看所有根问题：

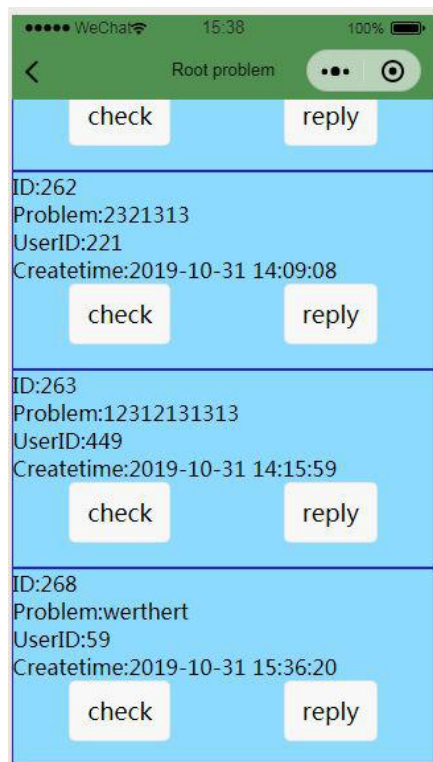

返回主界面， 点击 write， 进入新建问题界面：

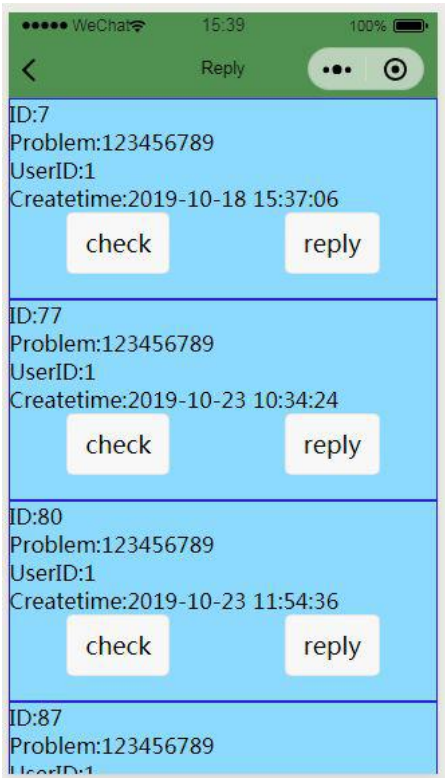

新建一个问题， 点击 publish 按钮发布：

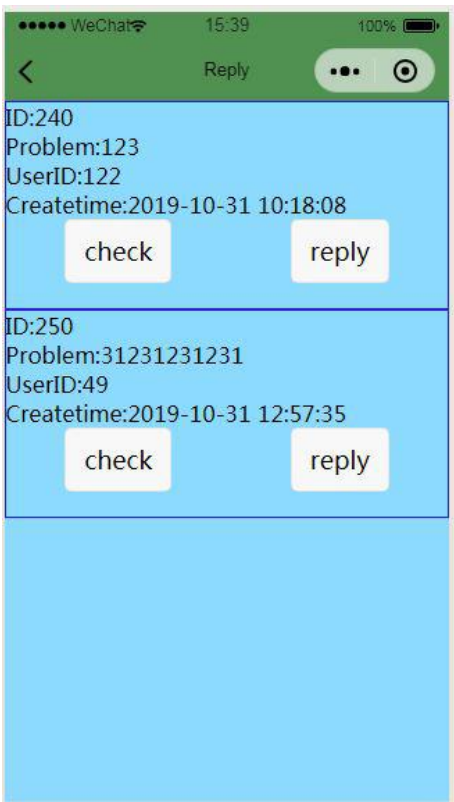

查看刚刚发布的根问题：

查看 ID 为 1 的问题的回复：

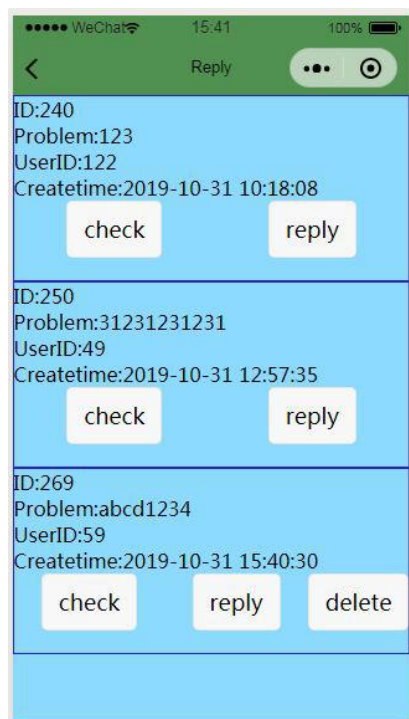

继续查看 ID 为 7 的问题的回复：

返回上一界面，点击 ID 为 7 问题的 reply 按钮，对其进行回复：

重新查看 ID 为 7 的问题的回复：

点击 delete 删除自己的回复，重新查看 ID 为 7 的问题的回复：
